Nishit Singh (he / him)

cv / blog / github

hey, i'm nishit. i study physics and engineering at the birla institute of technology and science (bits), pilani. currently, i'm interested in the unconventional ways physics interacts with ai, specifically world models, interpretability, and the likes.

i'm going to be pursuing my master's thesis with dr. kokil jaidka at nus, singapore. i've previously been associated with the csir national thin film laboratory (summer research intern), postman innovation labs and the kalipatnapu extended reality lab, and have had the privilege to be guided by dr. gaurav sharma and dr. sharad shrivastava in my exploits studying finite element methods. in what seems like another life, i worked with pieds, bits pilani as a student founder.

ive also found joy working with the film-making club and the cinema and literature club at bits.

taken at [xyz] in [xyz]. some of the best [xyz] is sold here.

i write about what i find interesting in life. in a discussion with a close friend, we came to the realisation that archiving is the cornerstone of human community. read here.

research

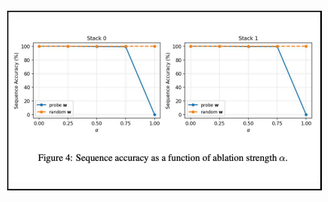

Figure 4: Sequence accuracy as a function of ablation strength α.

Causal Evidence of Stack Representations in Modeling Counter Langauges Using Transformers
